

### 35302 Waste Services Expenditure

I would greatly appreciate if you would be able to give me data on waste service expenditures in terms of prevention, reuse, recycling, waste-to-energy and landfill.

Figures would not need to be specific to textiles but just the general expenditure Edinburgh City allocates to on each of these waste streams.

For instance, prevention (expenditure on reducing consumption), reuse (expenditure on donation), recycling (up-cycling and down-cycling), waste to energy (incineration or other methods) and landfill.

Information does not need to be incredibly detailed, percentages of expenditure would be fine.

Please refer to the table below which provides information for the last full year, 2021/22:

Landfill	£812,809.98
Waste to Energy	£12,980,695.92
Recycling	£7,016,829.17
Prevention	£115,461.64
Reuse	£393.00
