

38810 Electric Vehicle Charging Points

How many electric vehicle charging points in general are there in your local council area?

There are 122 electric vehicle charging points owned by The City of Edinburgh Council. The Council does not hold records of privately-owned electric vehicle charging points.

How many of them are privately owned?

How many of them are owned by Tesla?

As above, the Council does not hold records of privately-owned electric vehicle charging points.

How many of them are owned by the council?

As per A1 above.

Of the privately owned ones, how many are not yet fully functioning (I.E they have been set up, but not “switched on” yet. For clarity I am not wanting to find out about broken chargers that at one time were working, but chargers which have been installed and are ready to go, but are not usable yet for any reason and have never been used).

Of these charging points, please tell me when each of them were first installed. (i.e, the infrastructure was first put in place)

Of the ones Tesla owns, how many are not yet fully functioning (I.E they have been set up, but not “switched on” yet. For clarity I am not wanting to find out about broken chargers that at one time were working, but chargers which have been installed and are ready to go, but are not usable yet for any reason and have never been used).

None – all electric vehicle charging infrastructure that has been installed by the Council is now fully functioning and available for the public to use.
