Regarding the new Currie High School project:

Any consideration given to potential connections from the site to Forth View Crescent (including level access) and to the adjacent Curriehill Station entrance.

During the planning for the new Currie Community High School the potential for improvements to facilities for walking, wheeling and cycling journeys both within the school site and in adjoining streets was investigated. Both of the specific improvements mentioned in the question were investigated as part of this work. Further detail of this is provided in the attached report.

Unfortunately, it was not possible to identify funding to allow these improvements to be delivered prior to the new school opening. Developer funding contributions secured through the Planning process have subsequently become available for use to provide active travel improvements in this area, including in some streets adjacent to the new school. However, it is not possible to provide the two specific improvements mentioned in the question using this funding.

A public consultation has recently been undertaken for these proposals and further information on this is available here: <https://consultationhub.edinburgh.gov.uk/sfc/currie-walking-wheeling-cycling>.
