

57531 Age of buildings on council books

The number of buildings within your council area which are 50+ years old, 60+ years old, or 70+ years old.

Where a building is more than 70 years old, the number of repairs presently required to that building and whether any of those repairs are high risk.

To fully respond to your request, we would have to check 2,448 entries on our asset list. For each entry, we would have to go through each individually to determine which properties are in scope of your request, obtain paper records for relevant property to provide information relating to the age of the building, determine which property is leased out and finally obtain the most recent condition report to determine the level of repairs required. With a conservative estimate of 5 minutes per entry, the time taken to complete this task for all 2,448 entries would be 204 hours.
