

57683 Prone restraints used across all facilities in Edinburgh

I would like to know how many prone restraints were used across all facilities in Edinburgh between 2012 and 2017 and if it could be broken down by location (e.g. carlton house, st katherines etc) that would be appreciated.

In the timeframe requested, 280 young people fall into the scope of your question. To evaluate whether restraints were used on just one young person, we would need to look at the young person's records, daily records, SWIFT and any archived record to make a judgement. We would estimate that this would take one hour per person, and therefore it would take approximately 280 hours to respond to this request fully.
