

58163 Street Lights

I notice new replacement street lights going in on Ravelston Dykes and elsewhere. I find this curious since it was only a few years ago when the traffic light 'tops' were replaced. The existing lights seemed to be working. Please provide documentation, budgets, and justification for this expenditure of funds to replace the street lights which describes the full extent of the plan, city-wide if applicable.

The recent work on two streetlights along Ravelston Dykes Road (ref: RBK07 and RBK08 as per attached map) was limited to the replacement of the street lighting columns. The need for the column to be replaced on streetlight RBK08 was identified during a structural test and inspection. The column on streetlight RBK07 was found to be damaged and leaning and therefore was also replaced. The lanterns that were renewed in January 2020 were retained and transferred to the new columns.
