

## 58519 Private Water Supply Data

If there are private water supplies and/or groundwater abstractions within the search area, I would be grateful if you could then supply the following, if possible: Source location (including National Grid co-ordinates) Properties supplied by each PWS source (including National Grid co-ordinates) Source type (i.e., groundwater or surface water). If groundwater - is it a spring, borehole etc; does it receive part of its flow from surface run-off? Abstraction rate Number of people served, or similar characteristics for industrial supplies (e.g., number of cows watered) Type A or Type B supply Nature and integrity of the construction, e.g., is there the potential for contaminants to enter the supply via overland flow?

The Private Water Supply (PWS) named Cockburn and Cockdurno is a borehole supply located at NT 15135 64513. It's a regulated PWS and therefore a Type A. We do not hold the grid references for the properties, therefore we have supplied the UPRN where recorded. Our records show 45 people being served by the PWS. The PWS also provides water for livestock, however we do not hold information on the numbers of livestock served. The PWS is estimated to provide 9m<sup>3</sup> per day. There is the potential for contaminants to enter the storage tank if there was sufficient overland flow; however, it is located very close to the boundary of the search area. We do not hold a grid reference for the tank.
