## **Product Composition Statement – Highways Products**

Highways products (speed calming, islands, refuges & segregation) are manufactured in large compression moulds and pressed under load and heat to obtain the desired shape. All products are manufactured in accordance with our documented QMS which conforms to BS EN ISO 9001:2015

Recycled SBR rubber granulate from UK derived vehicle tyres make up around 90% of each manufactured product. The rubber granules are bound together using 10% polyurethane binder manufactured in-house by Rosehill Polymers. Once fully vulcanised (cured) the binder is non-hazardous and inert.

All Rosehill Highways products are classified as non-hazardous for use, supply and transportation.

All constituent parts have been REACH registered by our chemical suppliers as part of their obligation under the REACH regulations.

Rosehill Polymers Group do not use any substances denoted as being “Of Very High Concern” (SVHC) that appear on the candidate list published by the European Chemicals Agency (ECHA) This list is monitored for updates to ensure compliance at all times.

For and on behalf of Rosehill Highways,
