

62076 Asbestos-Containing Materials - Policy and Procedures

Your written policy and procedure governing the acceptance, handling, and disposal of asbestos-containing materials (ACM) or products suspected to contain asbestos.

The Council's [Asbestos Policy](#) is available on our website.

The method you recommend for disposal, which could be:

Waste disposal facility; Council contracted removal; Self disposal by residents.

We don't take any types of asbestos in any of our [Household Waste and Recycling Centres](#) (HWRCs). To dispose of this, a member of the public would need to contact a specific asbestos removal company or SEPA. If it does happen to make its way onsite the staff will make the area safe, then take it to our quarantine area. We then contact our internal Scientific Services department, who will come out assess what type it is and remove it safely.
