Please provide details regarding the routine maintenance of rotating cones on pedestrian crossings in the City of Edinburgh.

How often are these scheduled?

The traffic signals in Edinburgh have a periodic inspection carried out yearly. The inspection is a full check of the signal installation condition, operation and electrical testing. These tests include checking the operation of the tactile rotating cones.

How many broken cones have been found?

We do not have a mechanism to report if broken Tactile Cones have been identified at the inspections. If they are identified they are repaired whilst the engineer is on site carrying out the inspection.

We have 42 reported faulty tactile cones in the last 12 months 01 August 25 – 19 August 26.

Also please provide details of how many crossings have sound?

Details below

How many have rotating cones?

Details below

Audio Only	58
Both	360
Tactile Only	208

The above covers all signalised crossings within Edinburgh, including those at signalised junction.

What is the total number of crossings?

381 standalone signalised crossings.
