

64268 Leith Connections Webpage

On the Leith Connections webpage, claims are made about community engagement.

I would like full information regarding the following claims:

'69% of respondents to our original survey felt that traffic levels were too high and 57% felt that traffic speeds were too high on their street.' –

Who was surveyed?

I would like detailed demographic information.

Demographic information from surveys undertaken is presented in the Leith Connections Stage 1 – Engagement Report Low Traffic Neighbourhood report published on our website at:

<https://consultationhub.edinburgh.gov.uk/sfc/leith-connections/>

'Market research told us that over three quarters of people said that motor vehicle traffic was an issue in the area.' –

How was this research carried out?

'Our research also showed significant disagreement that there are enough places to sit and relax in Leith.'

Again, how was the research carried out and who was included in the population?

Market research reports are available at the below link which details how research was carried out, results and a summary of business type:

<https://www.edinburgh.gov.uk/downloads/download/15555/leith-connections-market-research-survey>

It also says, 'when engaging we...visit businesses and run surveys.' –

Which businesses did you visit at each stage of the project?

I would like copies of the survey results.

Details of specific businesses and copies of the survey results shall not be provided.
