65281 Short-Term Lets Register

Please can I have a copy of the short-term lets register (which is usually published on this site https://www.edinburgh.gov.uk/licences-permits/short-term-lets-public-register) as of the following dates:

26.8.26

17.8.25

17.8.24

13.8.23

This information has been published before but as the register is updated monthly it is not possible, as far as I am aware, to access archive reports from the website as they are replaced each time.

If this is technically not possible for some reason, what I would like to use these reports for is to establish how many licences there were in each of the four types of STL licence types as of each of the above dates (or as close to those dates by how it is gathered).

The Public register provides a summary of current licences and applications and as such is a 'snapshot in time' and not a live document. It only shows current licences and applications that were in the system the moment the report was generated. As a result of applications constantly being processed, approved, and changed, every new version of the register will be different and no copies of the register are retained. As such, we are unable to provide copies of the register from the dates requested.

Attached is a table of data which includes the following:

- All STL licence or exemption applications granted and commencing on or before 26 August 2026
- All STL licence renewal applications received on or before 26 August 2026 and pending determination
- All STL licence renewal applications received on or before 2026 August and subsequently refused by the Council (noting that if a renewal application is lodged prior to the expiry of a STL licence, that licence continues to have effect until such a time as the renewal application has been determined).

This should allow you to extract data relevant to your request.
